Hello, my name is

Roman Hruška

and I am an **Android Developer**
And this is my **brief introduction (page 1)** and **CV (page 2)**

— ABOUT ME —

I am a constant learner, curious tech enthusiast and a natural optimist.

I am on a lookout for new opportunities, new places where I can fit, bring value and also grow and continue developing myself.

I am not afraid of challenges - in fact - I love them!

— TECH STACK —

I am playing around computers since my childhood.
Currently (since 2 years back) I focus on native Android Development in Kotlin.
I would still consider myself rather a junior, however I learned a lot recently and I won't stop!
I have a hands on experience with clean architecture and MVVM.
I don't feel that confident yet to build a complex app from scratch, but if you give me a code of such app and ask to deliver new feature or a change, I can get my head around it quite quickly. XMLs and Compose, I can do both!
I went through several courses and books on Android and Kotlin.
I have also some knowledge of Python, C++ and website development from the past, so that all helps me to get well with coding principles.
REST API's, SQL, of course.
Previously I was an RPA Developer (for 5 years). I built software robots to ease from tedious repetitive work. It was awesome, but I needed a change, so I sailed to Android.

— WHAT YOU SHOULD KNOW ABOUT ME —

I am
... based in Czechia and I am open to hybrid/remote cooperation.
... currently employed, however still looking for new challenges.
... interested in remote cooperation..
I am
... able to speak fluently with 1.8 billion people
... capable of basic communication with other 0.5 billion inhabitants of Earth
... learning constantly to improve my language set, working on Swedish and Spanish.

 Thank you for your time!
Feel free to read to the next page for the "classic" CV!

Traveling
Exploring the world
Technologies
People, Friends
Hiking, biking, motor-biking
Woodworking
Guitar & keyboard
Music

About me

I am technology enthusiast. I would say I am a life optimist and I believe that any problem can be solved. I really like challenges and learning new things. I like to have things organized and I like to share my knowledge with others.

As you can see below, my working history may look a bit unusual. I studied electro-technology. Then I switched to pedagogy. I taught teenagers for two years. I also run my own moving company for five years meanwhile. Then I learned about software robots and developed myself in it. The RPA itself gave me lots of experiences in tech field but I didn't have the chance to go deeper into programming which I feel like I am missing. Now I really wish to go deeper to coding than ever before.

Currently I am working as an **Android Developer** and I am eager and passionate to become very good at it and build some cool awesome apps!
